# Development and Evaluation of the PROWL Questionnaire

Ron D. Hays, Ph.D.

Senior Staff Fellow,
Division of Ophthalmic and Ear, Nose, and Throat Devices
ODE/CDRH/FDA

Professor, UCLA Department of Medicine Behavioral Scientist, RAND Corporation

## **Special Thanks**

Steve Reise, Ph.D.

UCLA Department of Psychology

Karen L. Spritzer, B. S. UCLA Department of Medicine

## Patient-Reported Outcomes (PROs)

- "Any report of the status of a patient's health condition that comes directly from the patient, without interpretation of the patient's response by a clinician or anyone else"
  - » Patient reports about their health
    - What they can do and how they feel
  - » Patient evaluations of health care

### **PRO Iterative Development Process**

#### . Hypothesize Conceptual Framework

- · Outline hypothesized concepts and potential claims
- Determine intended population
- Determine intended application/characteristics (type of scores, mode and frequency of administration)
- Perform literature/expert review
- Develop hypothesized conceptual framework
- Place PROs within preliminary endpoint model
  - Document preliminary instrument development

#### v. Modify Instrument

- Change wording of items, populations, response options, recall period, or mode/method of administration/data collection
- Translate and culturally adapt to other languages
- Evaluate modifications as appropriate
- Document all changes

#### iv. Collect, Analyze, and Interpret Data

- Prepare protocol and statistical analysis plan (final endpoint model and responder definition)
- Collect and analyze data
- Evaluate treatment response using cumulative distribution and responder definition
- Document interpretation of treatment benefit in relation to claim

#### ii. Adjust Conceptual Framework and Draft Instrument

- Obtain patient input
- Generate new items
- Select recall period, response options and format
- Select mode/method of administration/data collection
- Conduct patient cognitive interviewing
- Pilot test draft instrument
- Document content validity

#### iii. Confirm Conceptual Framework and Assess Other Measurement Properties

- Confirm conceptual framework with scoring rule
- Assess score reliability, construct validity, and ability to detect change
- Finalize instrument content, formats, scoring, procedures and training materials
- Document measurement development

## Identify Concepts and Hypothesize Conceptual Framework

- Literature, media, and citizen reports used to identify concepts of interest and potential confounders
  - » Functioning limitations
  - » Satisfaction with surgery
  - » Dry eye symptoms
  - » Expectations of surgery
  - » Coping
  - » Optimism/pessimism
  - » Depression/anxiety symptoms

## **PRO Iterative Development Process**

- Hypothesize Conceptual Framework
- Outline hypothesized concepts and potential claims
- Determine intended population
- Determine intended application/characteristics (type of scores, mode and frequency of administration)
- Perform literature/expert review
- Develop hypothesized conceptual framework
- Place PROs within preliminary endpoint model
- Document preliminary instrument development

#### v. Modify Instrument

- Change wording of items, populations, response options, recall period, or mode/method of administration/data collection
- Translate and culturally adapt to other languages
- Evaluate modifications as appropriate
- Document all changes

#### iv. Collect, Analyze, and Interpret Data

- Prepare protocol and statistical analysis plan (final endpoint model and responder definition)
- Collect and analyze data
- Evaluate treatment response using cumulative distribution and responder definition
- Document interpretation of treatment benefit in relation to claim

#### ii. Adjust Conceptual Framework and Draft Instrument

- Obtain patient input
- Generate new items
- Select recall period, response options and format
- Select mode/method of administration/data collection
- Conduct patient cognitive interviewing
- Pilot test draft instrument Document content validity

#### iii. Confirm Conceptual Framework and Assess Other Measurement Properties

- Confirm conceptual framework with scoring rule
- Assess score reliability, construct validity, and ability to detect change
- Finalize instrument content, formats, scoring, procedures and training materials
- Document measurement development

## Adjust Conceptual Framework and Draft Instrument

- Evaluated published surveys of target concepts
- Obtained permission to use copyrighted items
- Wrote new items

## Included Several Existing Measures in Draft Instrument

- National Eye Institute Refractive Error Quality of Life (NEI-RQL-42)
- National Eye Institute Visual Functioning Questionnaire (VFQ-25)
- Ocular Surface Disease Index (OSDI)
- Life Orientation Test Revised (LOT-R)
- Brien Holden Vision Institute Multidimensional Quality of Life (BHVI QOL) Scale for Myopia
- Work Productivity Activity and Impairment (WPAI)
- Patient Health Questionnaire (PHQ-4)
- Marlowe-Crowne Socially Desirable Response Set

## **Example of Visual Symptom Aberration Item**

INSTRUCTIONS: The next few questions are about <u>starbursts</u>. By starbursts, we mean seeing rays of light coming out from lighted objects, such as in the car headlights in the images below. These images may not represent exactly what you see and your symptoms may be more or less severe than what is shown.

In the last 7 days, have you seen any **starbursts**?

- 1. Yes, but ONLY when NOT wearing glasses or contact lenses
- 2. Yes, but ONLY when wearing glasses or contact lenses
- 3. Yes, when wearing AND when not wearing glasses or contact lenses
- 4. No, not at all

## Cognitive Interviews to Evaluate Draft Instrument

## Objectives:

- » To evaluate the content and ordering of the questionnaire, coverage of treatment-related issues pertinent to LASIK patients
- » To evaluate the usability of the electronic format of the questionnaire

## Cognitive Interviews Conducted by RAND

- Conducted in Los Angeles, CA and Washington, DC
- Pre-operative patients (n=9)
  - » Adults very likely to have LASIK in the next 6 months
- Post-operative patients (n=9)
  - » 1 dissatisfied
  - » 4 satisfied
  - » 4 with visual symptoms
- General Exclusions
  - » Eye care professionals, web site designers, and prior refractive surgery

## Adjust Conceptual Framework: Implementing Cognitive Interview Results

- Modified questionnaire with the following changes
  - » Ordering of items
  - » Clearer wording of some items
  - » Additional phrases to remind respondents of time frame
  - » Instructions were shortened and bulleted
  - » Formatting of web-based questionnaire to resemble other online surveys

## **Survey Measures**

- Existing Measures
  - » 7 NEI-RQL-42 scales (23 of 42 items)
  - » NEI-VFQ-25 driving scale (3 items)
  - » 2 of 3 Ocular Surface Disease Index scales (8 of 12 items)
  - » Lost work and productivity due to eye problems (3 items)
- New Measures
  - » Visual aberrations (4 scales)
  - » Expectations of spectacle independence/vision clarity (6 items)
  - » Satisfaction with vision (1 item)
  - » Satisfaction with LASIK surgery (8 items)
- Optimism (10 items)
- Health Proneness (10 items)
- Depression and Anxiety (4 items)

### **PRO Iterative Development Process**

#### Hypothesize Conceptual Framework

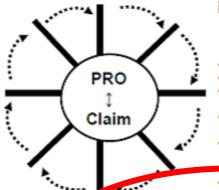

- Outline hypothesized concepts and potential claims
- Determine intended population
- Determine intended application/characteristics (type of scores, mode and frequency of administration)
- Perform literature/expert review
- Develop hypothesized conceptual framework
- Place PROs within preliminary endpoint model
- Document preliminary instrument development

#### v. Modify Instrument

- Change wording of items, populations, response options, recall period, or mode/method of administration/data collection
- Translate and culturally adapt to other languages
- Evaluate modifications as appropriate
- Document all changes

#### iv. Collect, Analyze, and Interpret Data

- Prepare protocol and statistical analysis plan (final endpoint model and responder definition)
- Collect and analyze data
- Evaluate treatment response using cumulative distribution and responder definition
- Document interpretation of treatment benefit in relation to claim

#### ii. Adjust Conceptual Framework and Draft Instrument

- Obtain patient input
- Generate new items
- Select recall period, response options and format
- Select mode/method of administration/data collection
- Conduct patient cognitive interviewing
  - Document cons. Syalidity

#### iii. Confirm Conceptual Framework and Assess Other Measurement Properties

- Confirm conceptual framework with scoring rule
- Assess score reliability, construct validity, and ability to detect change
- Finalize instrument content, formats, scoring, procedures and training materials
- Document measurement development

# **Assess Measurement Properties: Reliability**

Degree to which the same score is obtained when the *target* or thing being measured (person, plant or whatever) has not changed.

- ✓ Internal consistency (items)
  - ✓ Need 2 or more items
- ✓ Test-retest (administrations) correlations
  - ✓ Need 2 or more time points

## Internal Consistency Reliability and Item-Scale Correlations for 23 Multi-Item Scales

- PROWL-1
  - $\sim$  Median alpha = 0.78 (range: 0.55-0.98)
- PROWL-2
  - » Median alpha = 0.81 (range: 0.63-0.97)
- Item-scale correlations (hypothesized scales vs other scales) support item discrimination across scales

## Reliability Estimates for Visual Symptoms & Functioning

| Domain  | Coefficien                                   | t alpha                                      | Test-retest                                  | correlation                                  |
|---|--|--|--|--|
|   | PROWL1                                       | PROWL 2                                      | PROWL1                                       | PROWL 2                                      |
| Visual Aberrations Glare Starbursts Halos Double Image/Ghosting                               | 0.98<br>0.97<br>0.97<br>0.96                 | 0.97<br>0.97<br>0.97<br>0.95                 | 0.62<br>0.82<br>0.73<br>0.54                 | 0.66<br>0.63<br>0.72<br>0.86                 |
| NEI-RQL-42 Clarity of vision Near vision Far vision Glare Diurnal vision Activity Limitations | 0.67<br>0.74<br>0.79<br>0.55<br>0.89<br>0.76 | 0.71<br>0.76<br>0.78<br>0.65<br>0.86<br>0.71 | 0.80<br>0.61<br>0.79<br>0.48<br>0.77<br>0.80 | 0.77<br>0.85<br>0.93<br>0.69<br>0.74<br>0.90 |

## Reliability Estimates for Psychological Factors

| Domain  | Coefficient alpha |         | Test-retest correlation |         |
|---|-------------------|---------|-------------------------|---------|
|   | PROWL1            | PROWL 2 | PROWL1                  | PROWL 2 |
| NEI-RQL-42 Worry                                      | 0.83              | 0.82    | 0.68                    | 0.69    |
| Health Proneness                                      | 0.85              | 0.84    | 0.70                    | 0.79    |
| Optimism  | 0.77              | 0.81    | 0.70                    | 0.91    |
| Depression/Anxiety                                    | 0.80              | 0.81    | 0.68                    | 0.85    |
| Expectations of spectacle independence/vision clarity | 0.61              | 0.63    | 0.75                    | 0.85    |

## **PROWL-1 Item-Scale Correlations Example**

| Item Number                    | Ocular Surface<br>Disease | NEI-RQL Clarity<br>Vision |
|--------------------------------|---------------------------|---------------------------|
| Q65 (eyes sensitive to light)  | 0.38*                     | 28                        |
| Q66 (eyes feel gritty)         | 0.32*                     | 20                        |
| Q67 (painful or sore eyes)     | 0.32*                     | 15                        |
| Q68 (blurred vision)           | 0.46*                     | <u>57</u>                 |
| Q69 (poor vision)              | 0.47*                     | <u>53</u>                 |
| Q70 (uncomfortable—wind)       | 0.44*                     | 15                        |
| Q71 (uncomfortable—humidity)   | 0.45*                     | 15                        |
| Q72 (uncomfortable—air cond.)  | 0.31*                     | 15                        |
| Q5 (how clear is your vision?) | 21                        | <u>0.12*</u>              |
| Q34a (distorted vision)        | 35                        | 0.52*                     |
| Q35a (blurry vision)           | 45                        | 0.65*                     |
| Q36a (trouble seeing)          | 48                        | 0.62*                     |

# **Assess Measurement Properties: Validity**

- Content validity: Does measure "appear" to reflect what it is intended to (expert judges or patient judgments)?
  - » Do items operationalize concept?
  - » Do items cover all aspects of concept?
  - » Does scale name represent item content?
- Construct validity
  - » Are the associations of the measure with other variables consistent with hypotheses?

## **Threats to Validity**

 Those with higher levels of expectations about surgery will be less satisfied with surgery

» The correlations between expectations and satisfaction with surgery were <u>not</u> statistically significant at the 1-month, 3-month, and 6-month follow-ups in PROWL-1.

## Threats to Validity

 Those with lower health proneness at baseline will be less satisfied with surgery

» Only the correlation of health proneness with 3-month satisfaction with surgery was statistically significant and it was a small correlation (r = 0.14, p = 0.0443) in PROWL-1.

## Threats to Validity

 Those with depressive/anxiety symptoms at baseline will be less satisfied with surgery

» Only the correlation of the PHQ-4 with 6month satisfaction with surgery was statistically significant and it was a small correlation (r = -0.19, p = 0.0043), PROWL-1.

## **Support for Validity**

 Those with a greater degree of visual aberrations will be less satisfied with surgery

- » Correlations statistically significant in hypothesized direction at 1-month, 3-month and 6-month follow-up in PROWL-1:
  - Glare (r's = 0.34, 0.36, 0.43)
  - Starbursts (r's = 0.27, 0.24, 0.32)
  - $\blacksquare$  Haloes (r's = 0.37, 0.34, 0.49)
  - Double images (r's = 0.43, 0.37, 0.39)

## **Usability Results**

|   | PROWL-1    | PROWL-2    |
|---|------------|------------|
| Minutes to Complete (median)                                    | 25         | 20         |
| Length of Questionnaire About right A little too long           | 46%<br>40% | 64%<br>33% |
| No problems using computer  True  False                         | 86%<br>10% | 90%<br>8%  |
| Ease of taking questionnaire by computer vs paper Easier Harder | 54%<br>14% | 69%<br>5%  |

## **Summary**

 This study provides support for use of PROWL questionnaire

- » Reliable
- » Measures the concepts it purports to measure
- » Practical to administer even in a mobile population

## **PRO Iterative Development Process**

#### Hypothesize Conceptual Framework

- Outline hypothesized concepts and potential claims
- Determine intended population
- Determine intended application/characteristics (type of scores, mode and frequency of administration)

Claim

- Perform literature/expert review
- Develop hypothesized conceptual framework
- Place PROs within preliminary endpoint model
- Document preliminary instrument development

#### v. Modify Instrument

- Change wording of items, populations, response options, recall period, or mode/method of administration/data collection
- Translate and culturally adapt to other languages
- Evaluate modifications as appropriate
- Door ...ent all changes

#### iv. Collect, Analyze, and Interpret Data

- Prepare protocol and statistical analysis plan (final endpoint model and responder definition)
- Collect and analyze data
- Evaluate treatment response using cumulative distribution and responder definition
- Document interpretation of treatment benefit in relation to claim

- options and format

  Select mode/method of
- administration/data collection
- Conduct patient cognitive interviewing
- Pilot test draft instrument
  - Document content validity

#### . Confirm Conceptual Framework and Assess Other Measurement Properties

Confirm conceptual framework with scoring rule Assess score reliability, construct validity, and ability to detect change

- Finalize instrument content, formats, scoring, procedures and training materials
- Document measurement development
